Darwin Tulips ~ MAY-FLOWERING

Our Bulbs are the very highest quality, all top roots and especially selected for us.

A distinct race of Single Late Tulips with immense flowers of well rounded form, on tall, thick stems from 2 to 3 feet in height. This, with their very brilliant colors, ranging from almost pure white through all the shades of pink and purple to the most intense red, makes them unsurpassed for planting out or for cutting. The varieties we offer are selected from a very large collection as the best and most distinct, containing none but the large flowering sorts. Forcing sorts marked with an asterisk (*).

NOTE: Mailed free at the dozen price, otherwise add postage at zone rate. Weight, 1 lb. per doz., 8 lbs. per 100.

As it generally becomes difficult to supply the newer and scarcer varieties later than September 15th to 20th, we recommend early ordering.

Double Early Tulips

These are useful for bedding and forcing; the large, peony-like blossoms are highly ornamental, coming into bloom about a week or more after the Single Early sorts, and lasting considerably longer in flower. They make the best display, and the effect is better when planted one variety in a bed or clump. The letter after the name indicates the time of bloom; those marked (A) bloom together, followed in about a week by (B) and (C), the latest.

Mailed free at the dozen price, otherwise add postage at zone rates. Weight 1 lb. per doz., 7 lbs. per 100.

The star (*) indicates best sorts for forcing.

TULIP PLANTING SUGGESTIONS

When massed in beds or large clumps, the best effect is obtained. Double and Single sorts, when planted together in clumps among the shrubs or perennials, give a longer season of bloom than if either were planted alone. For best effect, when planted in small clumps, the bulbs should be set 4 inches deep and 4 inches apart, but in large beds or borders a distance of 5 or 6 inches between the bulbs can be allowed.

Exhibition Hyacinths

Culture: These Hyacinths should be planted from 6 to 10 inches apart, and covered with at least 4 inches of soil from the top of the bulb. For beds or borders close to the conservatory or dwelling, 6 inches will make a fine display; but where the beds are planted to be viewed from a distance, they may be planted 10 inches apart. Hyacinths planted alternately with Narcissi produce a most graceful effect, and for this combination 6 inches from bulb to bulb is also a suitable distance. It is advisable to cover, after the bulbs have been planted, with leaves or some heavy material that will prevent them from freezing or being affected by early spring frosts after they have started.

Hyacinths, as well as Narcissi, should be planted by November 1st in this latitude, as they are the better for early planting. Tulips may be planted up to December 1st, weather permitting.

These are all extra selected top root bulbs and the best varieties for exhibition purposes and house culture. If by parcel post, add postage at zone rates. Weight 7 pounds per dozen.

Pot Grown Strawberry Plants

The Strawberry will grow in any good garden soil where the ground has been thoroughly prepared. For family use we recommend planting them in double rows, 1 foot apart each way and 3 feet between the double rows. Our pot-grown Strawberry plants are well rooted, healthy plants, ready for shipment in August, and by setting them any time during August and September, a fine crop of fruit may be had the next season. The following sorts have proved the most satisfactory for growing in this locality.

\$6.00 per 100, \$50.00 per 1000, unless otherwise priced.
